Concorde Informatics has expertise in the design and implementation of major data centres for new build and refurbished environments.

We understand that data centres are complex environments that need to be designed with a number of considerations in mind right from the start – from fundamental mechanical and electrical components, such as power consumption and cooling efficiency systems, through to cabling infrastructures and back end hardware.

Our ability to look at the whole picture means that your hardware requirements are factored into our data centre designs from day one, ensuring that the end result is a solution that has been tailored to meet your specific business needs.

By sharing our knowledge and experience with clients, we take the pain out of designing and implementing efficient data centre solutions, leaving them free to focus on their core activities.

### Data Centre Build & Server Room Build Services:

- Racks
- Environmental Monitoring
- Server Management
- Power Monitoring
- Computer Room Design and Build
- Data Centre Security
- Computer Room Cleaning
- Raised Flooring
- UPS
- Fire Protection and detection
- Air conditioning / HVAC
- Monitoring and Management
- Standby Power Generators
- Cold Corridor

Concorde Informatics works to the latest industry standards from the Telecommunications Industry Association. The new TIA-942 - Telecommunications Infrastructure Standard for Data Centres addresses all of the key items relevant to the designing of a data centre. This standard specifies the minimum requirements for telecommunications infrastructure of data centres and computer rooms and should be read in conjunction with other documents written about the subject including the Uptime Institute White Papers and the ASHRAE Thermal Guidelines for Data Processing Environments document.
